

Dual Track Systems

Our dual track systems combine our sturdy DuraScreen retractable screens with the protection of our vinyl panels. Together you have the versatility of a super strength vinyl panel to eliminate rain and wind along with a rugged, retractable screen that lets you enjoy the weather without pests, heat and rain. Many customers choose a dual track option for barns and utility sheds. Many restaurant owners choose this system for patios and smoking areas. It gives you the flexibility of non-permanent weather protection along with ventilation.

DuraScreen Vinyl Panels

Vinyl Panels allow you to instantly enclose virtually any opening with an impenetrable barrier against wind, inclement weather and winter. Each panel is made with our patented self sealing design along with super durable vinyl panels – hand crafted to your exact specs – with or without windows.

Vinyl panels are often chosen for screen porches and lanais during cold and blustery weather so that the area can be easily heated. Restaurants often use our vinyl panels in conjunction with fixed panel screens to extend the use of outdoor dining areas and protecting guests. Check out our gallery and see the possibilities.

Screens & Panels**
FOR ANY APPLICATION

Snap on screens – Costa Rica

Custom Made Screens and Panels

We make screens. Big ones. Tough ones. Long lasting, durable screens. We make them for fixed panels, retractable screens, vinyl panels – with and without windows. And, we make them for virtually any application you can think of. From porches and warehouses to restaurant seating areas, patios, garages and gazebos. We're the guys everyone calls when they want a custom solution to keep pests, wind and rain out so they can enjoy their outdoor environments in peace.

The Last Screen You'll Buy

DuraScreen products are the toughest screens and panels you'll find. We've literally hit golf balls at them, hurled bowling balls into them, and even had a 225 pound man run into one and bounce off like a fly. Through it all – and trust us, we tried much more – our screens and panels showed no wear and always snapped back to a tight finish.

Fixed Panel DuraScreens

If you're tired of lightweight screens that droop, sag and can't take the rigors of daily life – like toddlers, tipsy party guests, or flying objects – it's time to order the last screen you'll ever need.

THE SUPER TOUGH, STRETCH SCREEN

Fixed Panel DuraScreens are custom made using a highly durable stretch screen fabric that can absorb massive amounts of energy and instantly snap back to a drum-tight finish.

CUSTOM MADE FOR ANY OPENING & EASY TO INSTALL

Since DuraScreens stretch in every direction, it's easy to get a drum tight, no sag installation – every time. Triangles, octagons, trapezoids...bring it on. You merely position the screen in your opening and let the installation screws pull the screen into a super tight finish. All of our screens cut down on wind and rain while keeping pests out, along with every other flying object, like errant baseballs and golf balls.

Retractable DuraScreens

Our retractable screens were originally designed for the commercial and agricultural industries to provide a tough, durable screen that would keep birds out, while allowing fresh air to flow through buildings. It wasn't long before we were getting orders from restaurants, warehouses and homeowners, throughout America and Canada. Today our Retractable Screen Systems are being used for garages, screen porches, gazebos, warehouses, barns...you name it. The DuraScreen Retractable System is the affordable way to turn virtually any outdoor area into a cool, comfortable and pest-free sanctuary.

- **CONCEALED DESIGN**
- **ROLLER & MOTORS ARE HIDDEN FROM VIEW**
- **PROFESSIONALLY INSTALLED OR DO-IT-YOURSELF**
- **WHISPER QUIET OPERATION**

COMPLETELY SELF SEALING

Our unique track design is what makes the retractable screen system possible. Heavy duty extruded anodized aluminum tracks are mounted to the side jambs of the opening. The screen rides within these tracks, preventing gaps and keeping the screen taut throughout its operation. Along the bottom rail sits a rugged, rubber gasket that allows the bottom rail to mold itself to the contour of the ground.

AVAILABLE IN AUTOMATIC OR MANUAL

Any retractable screen can be made with a manual crank system or with an automatic roller. Our automatic designs feature a whisper-quiet motor that operates the screen at impressive speeds and is easily controlled by a handy remote control, just like any common garage door opener, only quieter and with equal or greater speed.

DuraScreen Retractable Screens can be ordered with different degrees of shade, including 72%, 92% or solid vinyl and solid vinyl with clear vinyl windows.
